

maGma's Studio consists of expert and experienced artists in every part, who will be by your side in all stages from idea generation to 3D model, rendering and execution, so that we will provide you the best quality.

.Carrying out dozens of projects, from design to performance, has dispensed an approach to this team that by adopting a wide view to the previous and subsequent stages, to enforce the best in every part.

Design

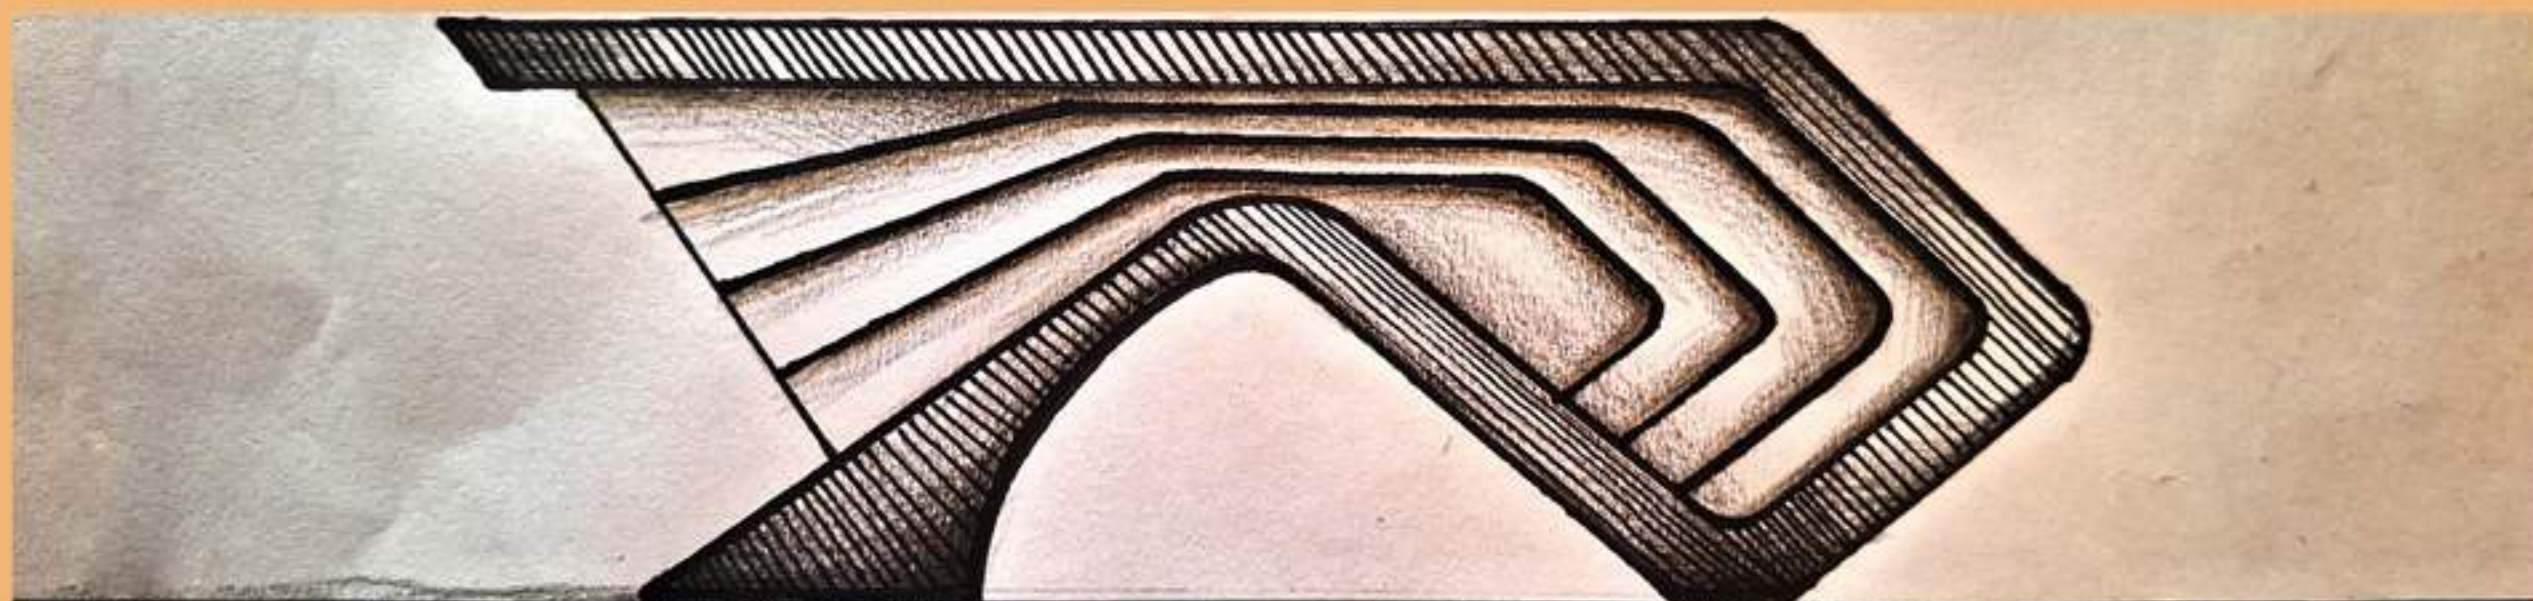

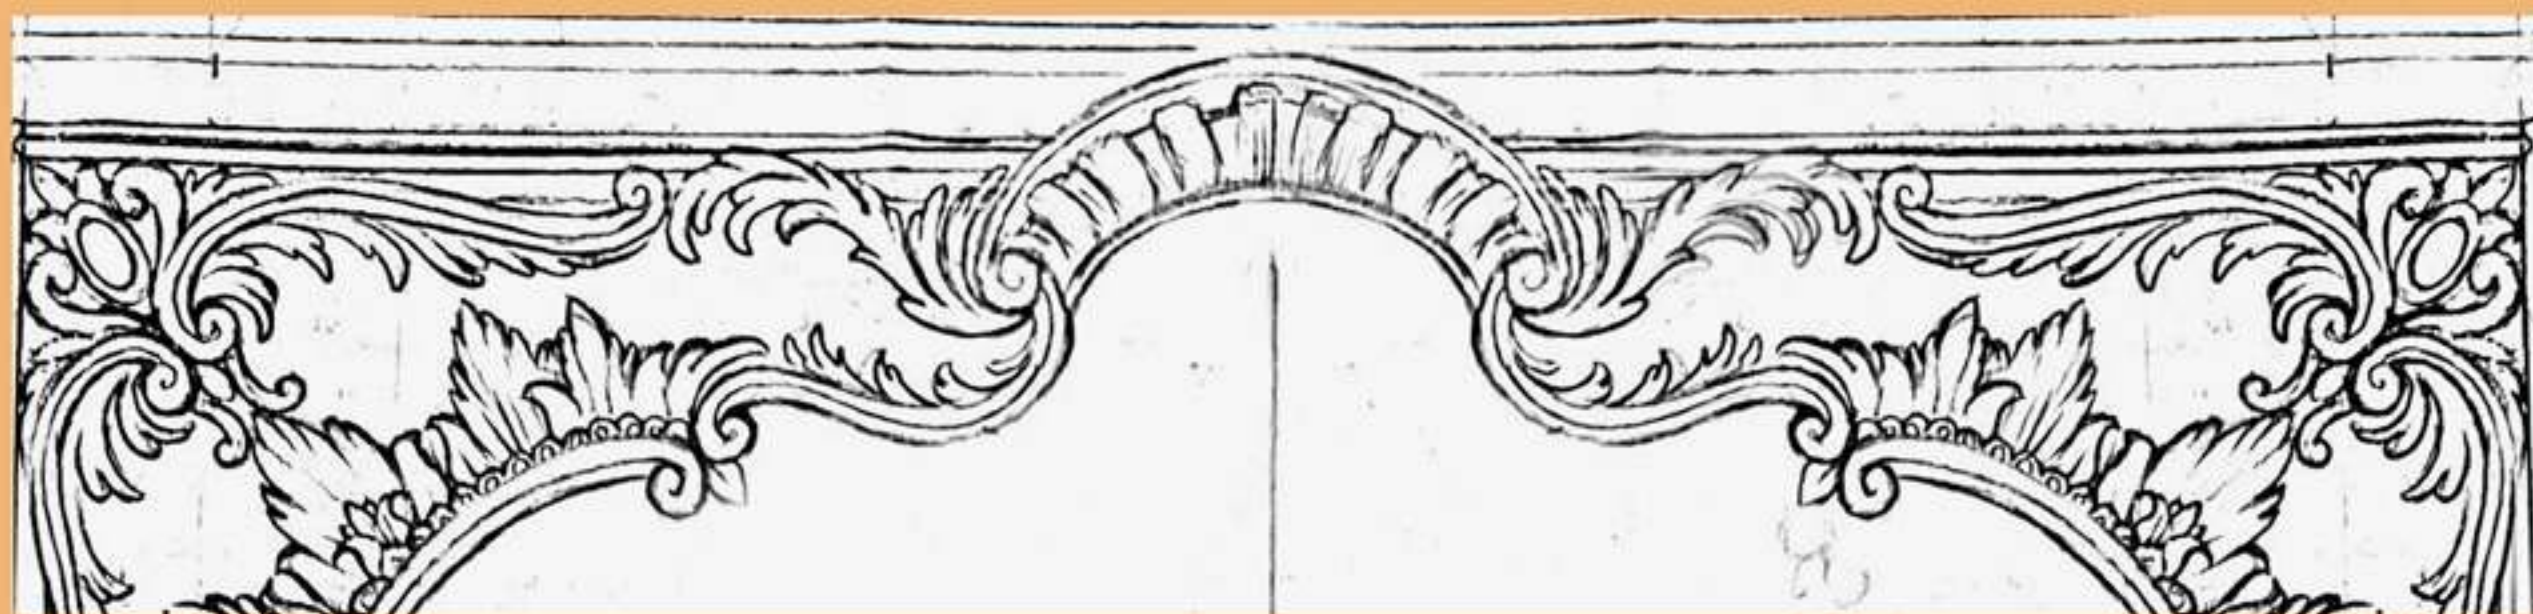

3D Model

Final product

all the **Designs**

will be accomplished by experts who act professionally in distinguished fields, like chromatics, lighting, morphology, etc. in their own styles.

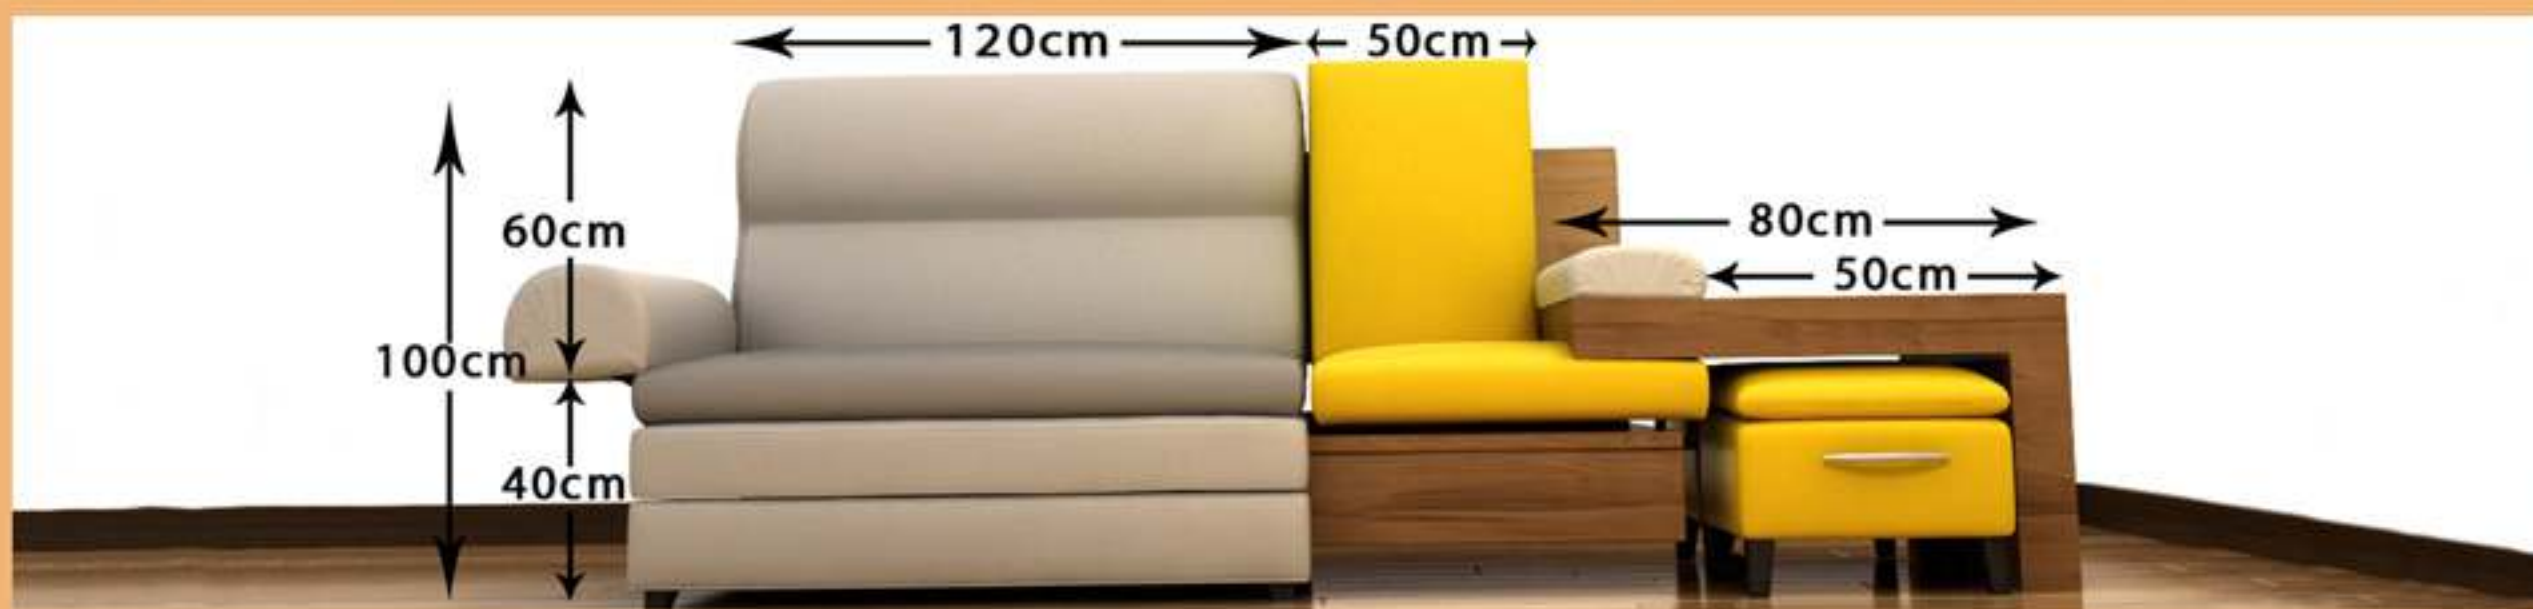

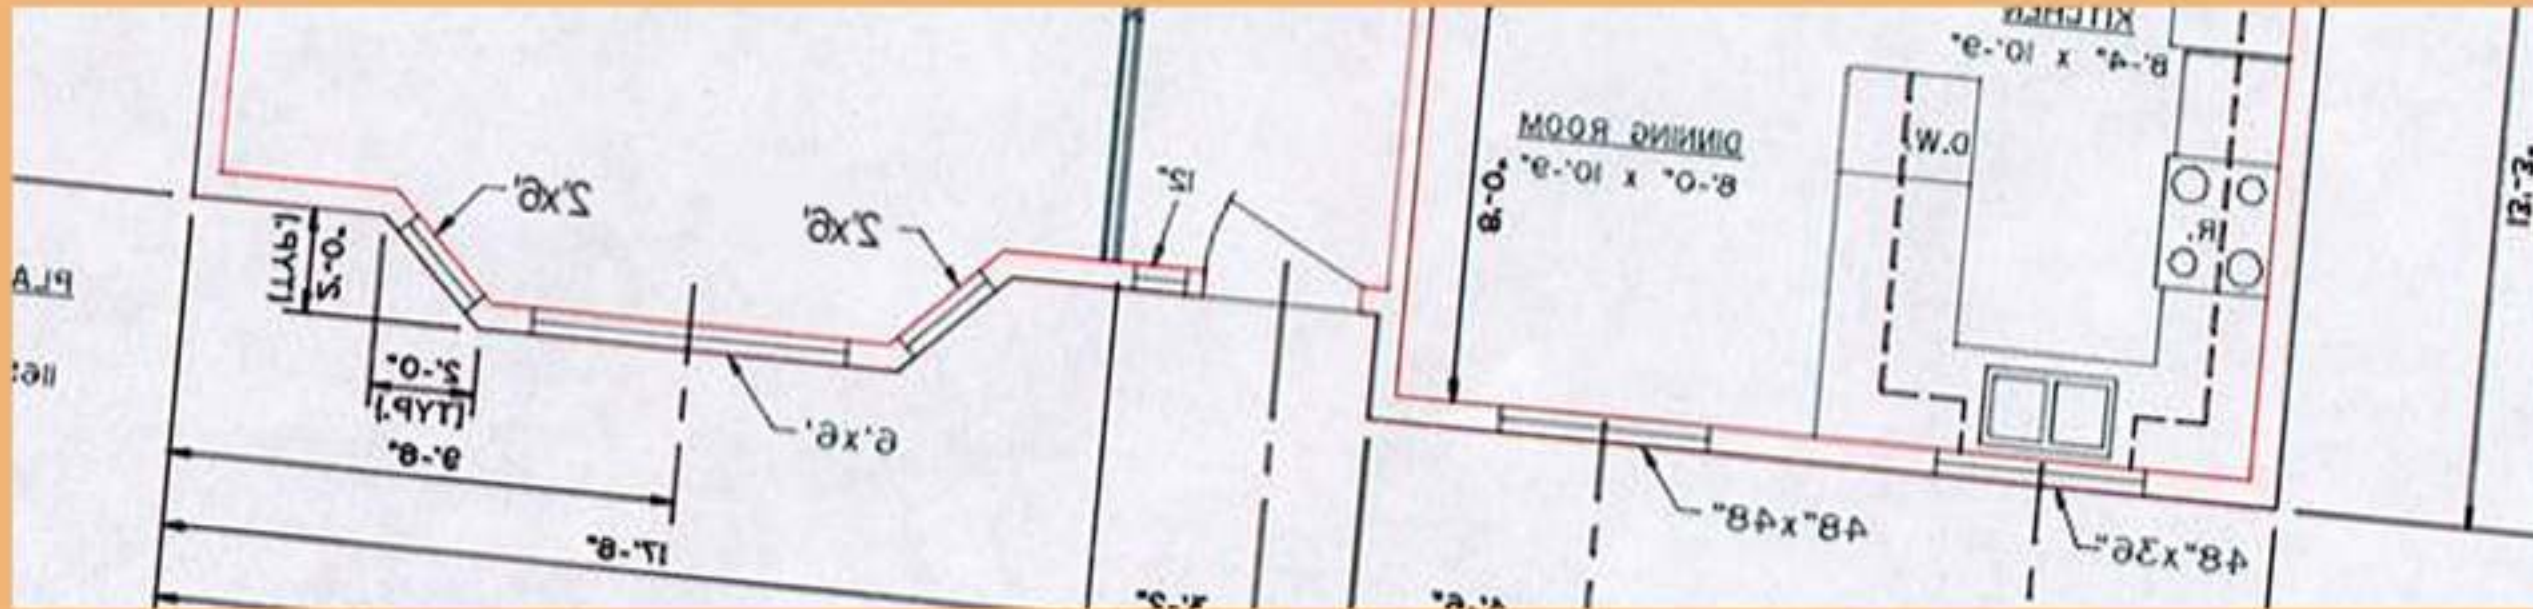

3D Modeling will be fulfilled according to the designed plan in real and detailed dimensions. All the modeling stages will be performed according to modeling standards. These 3D models are totally suitable for rendering and direct use to perform (like executive plans, and inputs for 3D printing and CNC machines).

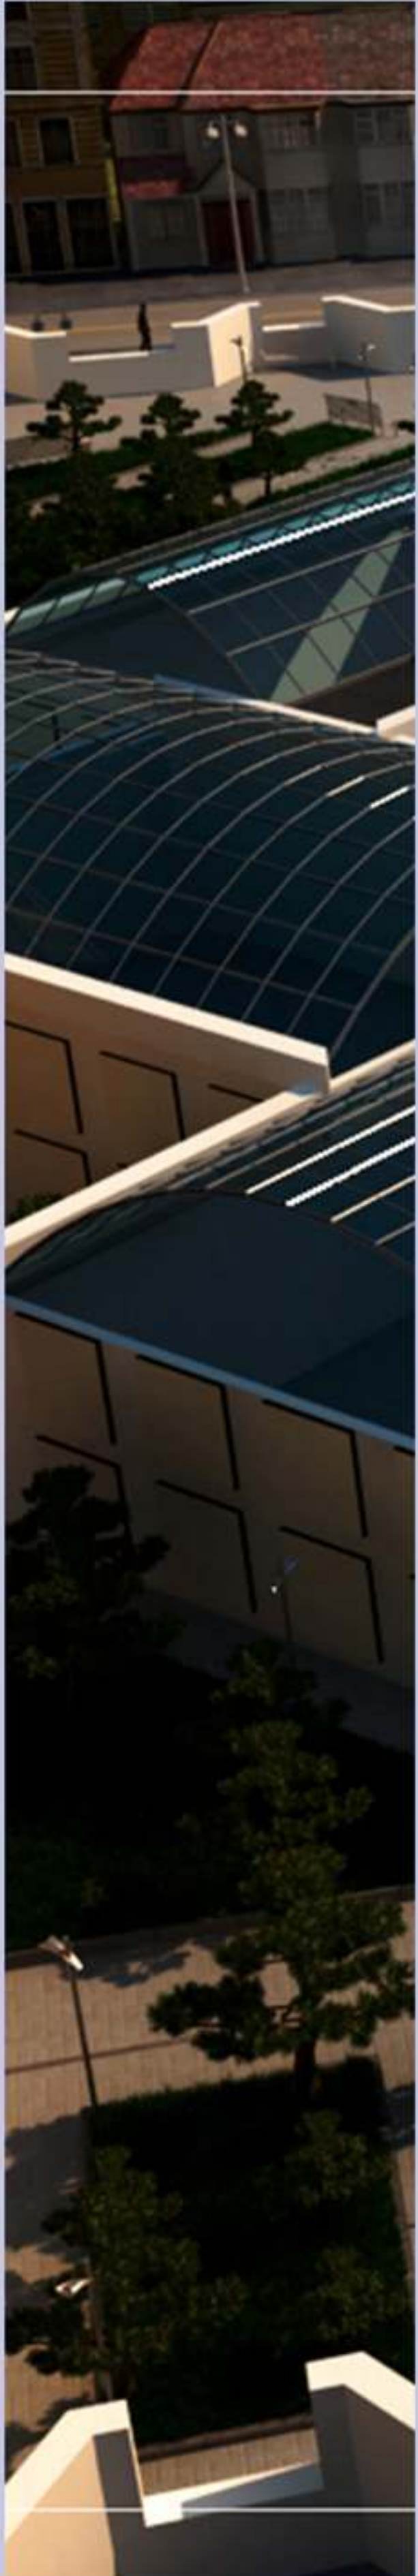

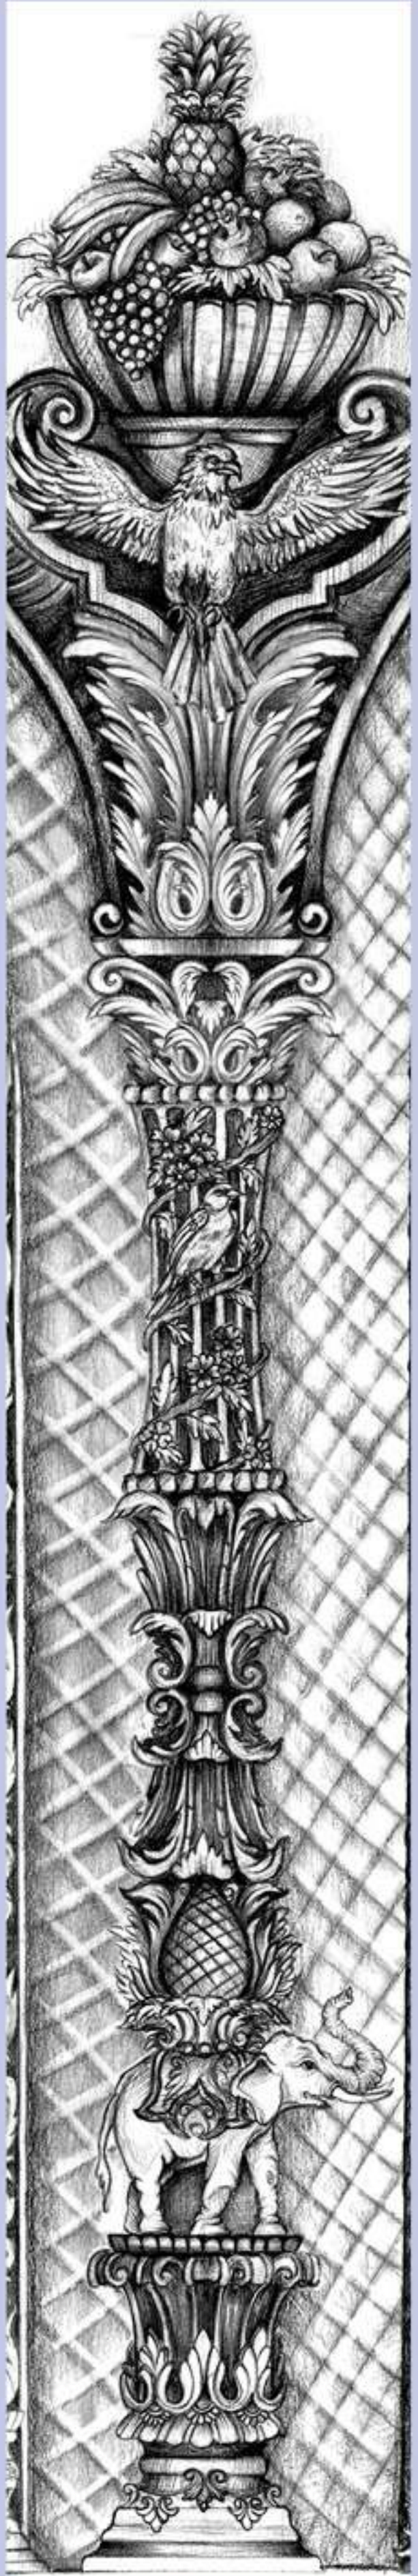

Rendering of designs will be done according to the original and placed materials in the real environment to create and present the closest possible state to the reality.

the Executive Pack includes all the plans, data, and files which the executive teams need.

The needed plans, details, and files for CNC and 3D printing, will be assembled and presented as an album.

Tower 3D Modeling

maGma's architectural visualization will bring your projects to life before you've even laid the foundations of your building.

Modern Facade Design

Classic Facade Simulation

Interior Rendering

Blow your Audiences' mind
with jaw-dropping visuals
for your design ideas.

With detailed photorealistic, well-thought lighting
and camera settings.

Interior Product Design

Interior Product Rendering

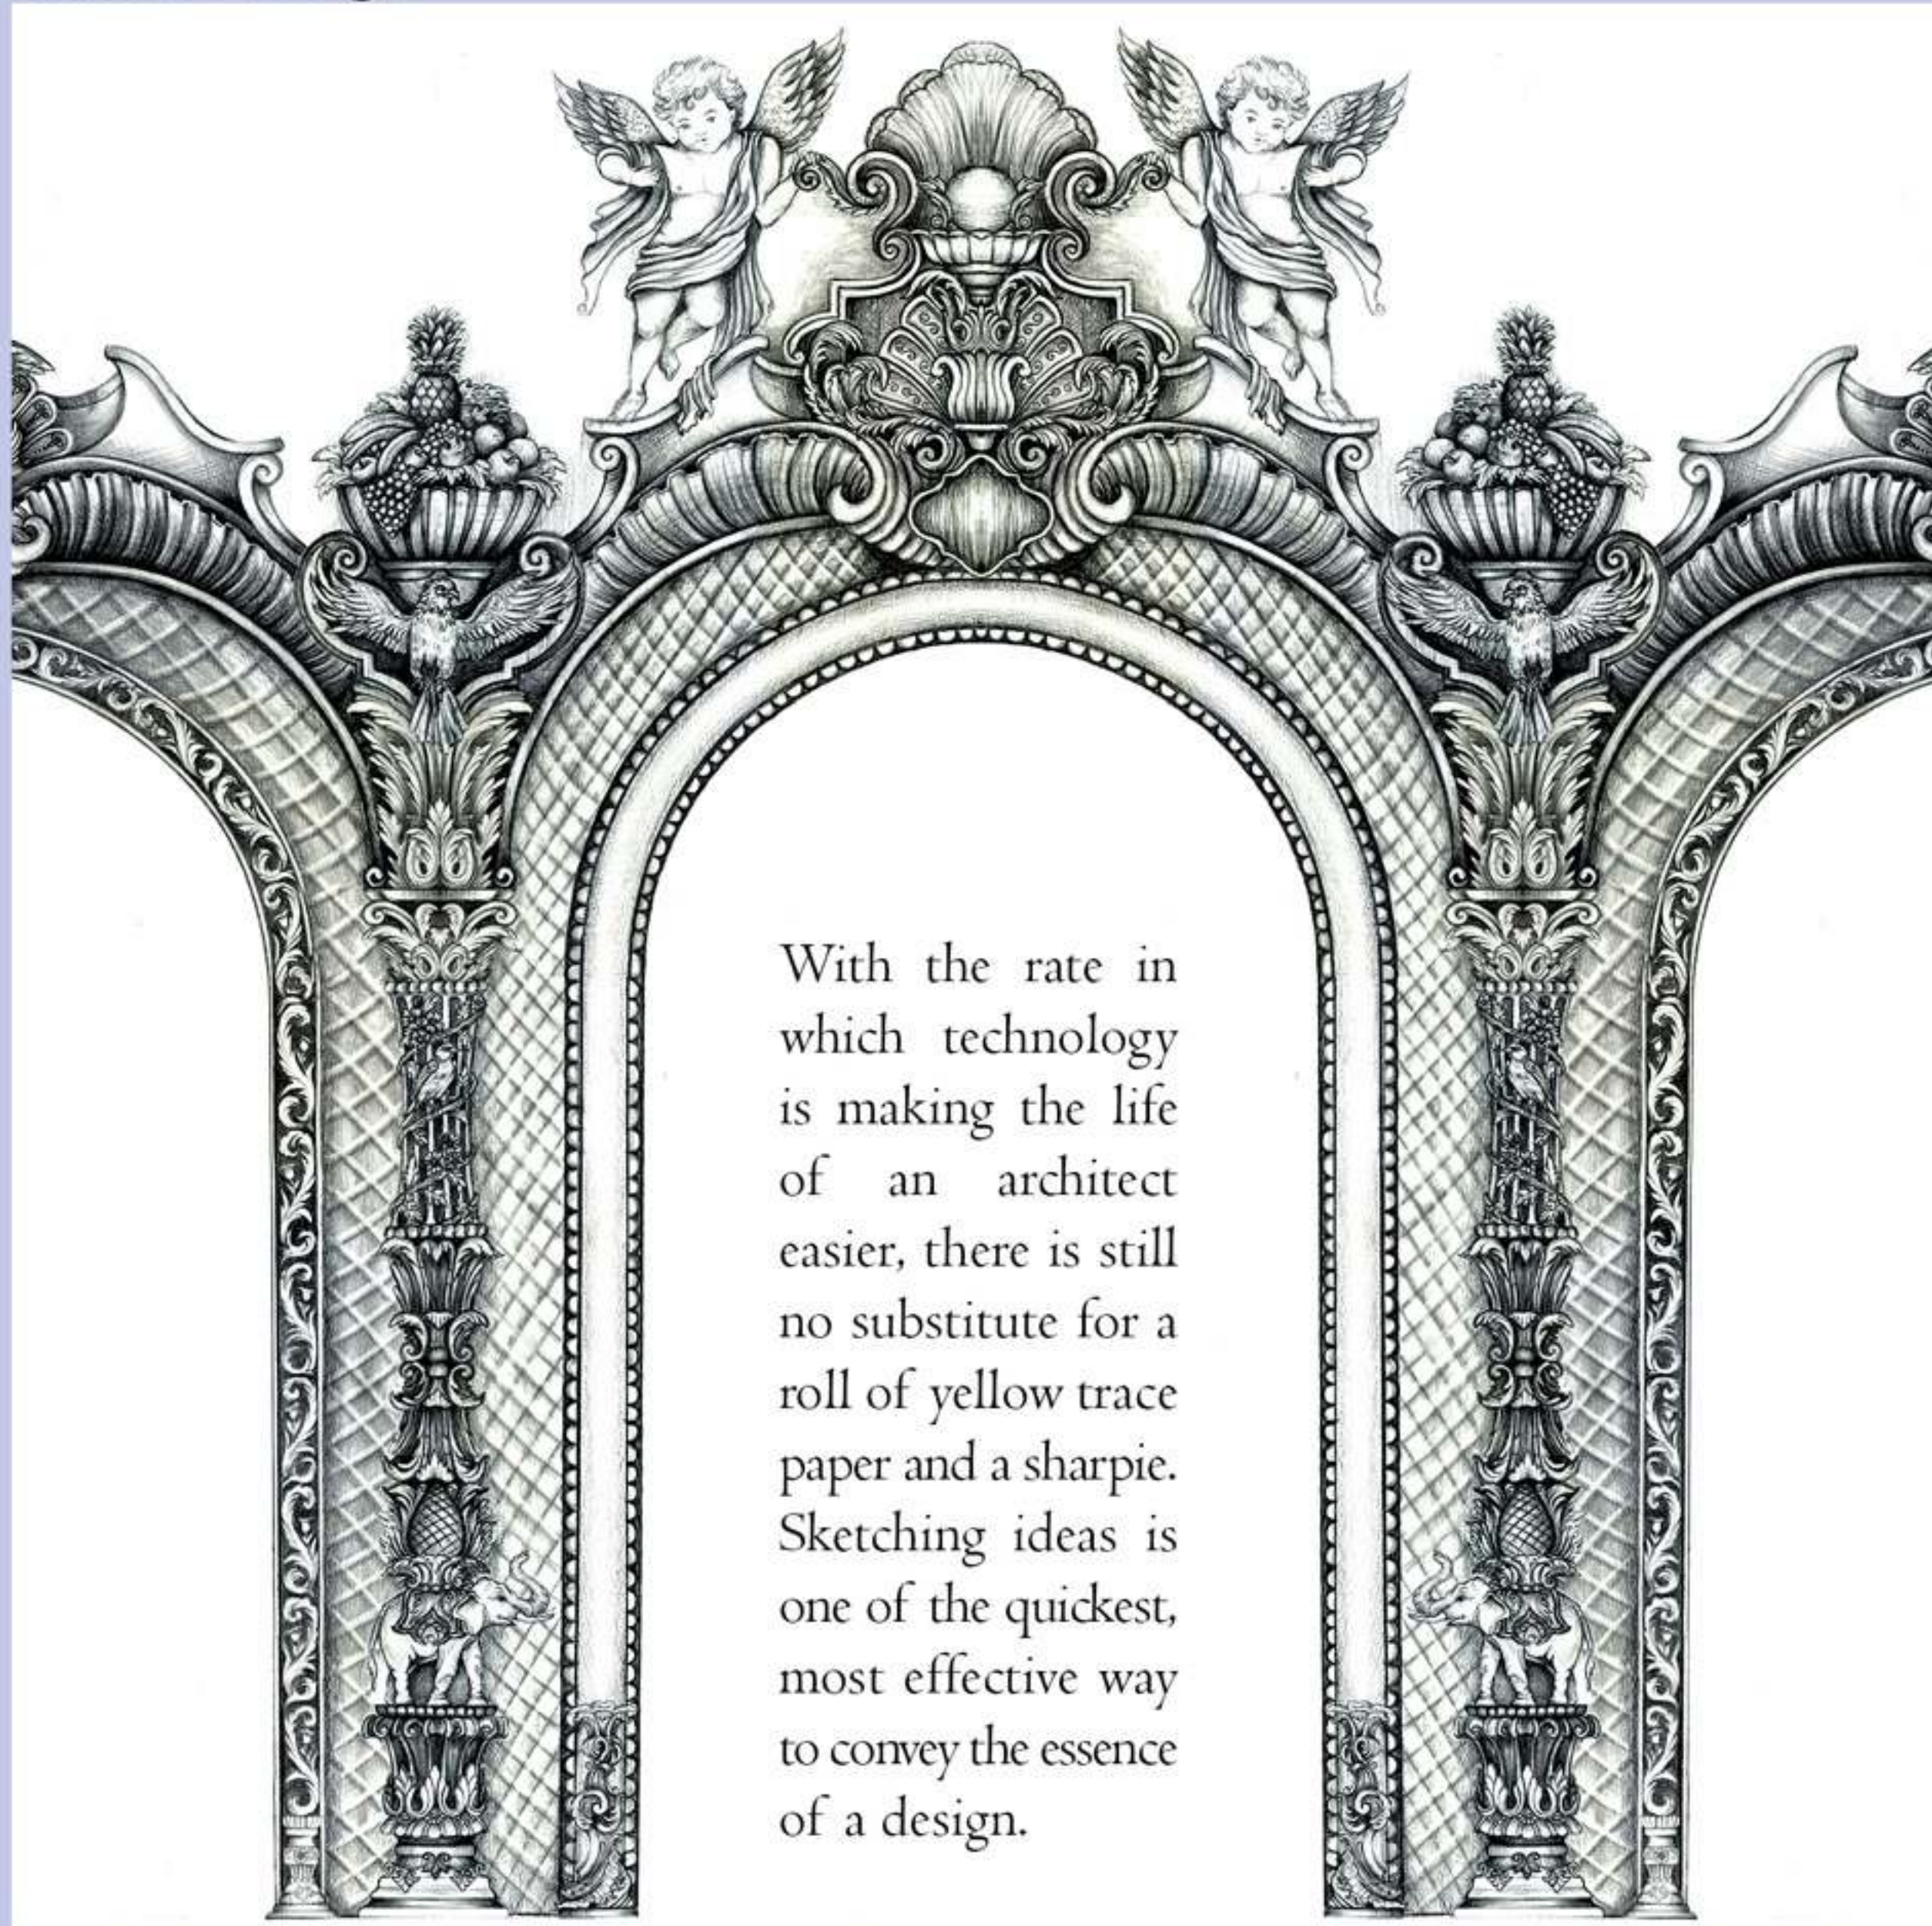

Product Modeling

Today, computer-supported visualizations offer the most comprehensive possibilities for project communication with all those involved and interested. They support quality assurance at all project stages, serve as a decision-making aid during conception and promote the marketing of planned construction projects.

Product 3D Modeling

Classic Design

3D modeling of the exterior provides an opportunity to architecturally visualize, evaluate all details and proposals, and create a real prototype of the project before the actual construction work begins.

Animation Environment Modeling

Animation Environment Modeling

Building Architecture Design

Office Interior Rendering

We render your projects according to physically correct light and shadow parameters, true-to-scale 3D models and detailed material of your planning data.

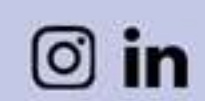

Interior Design

maGma studio

relying on its experience and broad architecture, engineering and technology know-how, advise and accompany you competently from the vision to success to the great sensitivity and the best quality, and finally a lasting product is left behind.

Whether your project is a product, building, 3D model for 3D print or landscape, we can always help you present it in the most informative and visually stunning way.
